

# Future Careers

By: Austin Edghill

## Accountant/CPA

In my future I might become an accountant because you ensure that the Nation's firms are run efficiently. Another reason is that you ensure public records are kept accurately. I also like this job because you can work in a good office setting.

There were 1.3 million jobs in 2006 and it is supposed to rise 18% by the year 2016 so I'll have a really good chance of getting the job. The only thing I don't like about the job are that there is a 150 hour law for CPAs. So I think this would be a great job for me because I'm really good at working with money and I can help people with their money problems.

## Musician/singer

In my future I might become a musician because you get to play instruments. Another reason I might do this job is that I can compose my own music. I also like this job because you mainly work at night so you have all day to do what you want. This job would be fun because you get to travel a lot. I really like this job because there were 264,000 jobs in 2006 so there is a pretty good chance I could get the job.

I would get paid pretty good too because the average salary for musicians was \$39,750 in 2006. The only things I don't like about this job is that there is a high competition for this job and usually people don't get a good enough contract so they have to work another job. So I think this would be a great job for me because I love to play the drums and I have the highest interest in music.

## Psychologists

In my future I might become a psychologist because you get to study human behavior. I would also get to provide mental health care for clients. What I like the most about this job is that you get to set your own hours. I need to get a doctoral degree and a license though to do this job but that's ok with me. I think I could get this job because there were 166,000 jobs in 2006 and they are expected to rise 15% from 2006-2016. The only things I don't like about this job are that there is a high competition for this job and there are a lot of deadlines and tight schedules. I would get paid at an average of \$59,440 if I do this job in the future. So I think this would be a great job for me because I like studying human behavior and I like to form hypotheses on data.
